SOIL SAMPLES FROM FORWARD AREA

If the 500 pounds of soil we requested has not already been dispatched, it would be advantageous if it could be sent either to the individual laboratories which will be working with it or to the Department of Agriculture at Beltsville.

I would suggest that about 150 pounds be sent to each of the following:

Mr. Kermit H. Larson
Chief, Alamogordo Section
Atomic Energy Project
University of California
West Los Angeles 24, Calif.

Dr. Cyril L. Comar
Laboratory Director
UT-AEC Agri. Research Program
Oak Ridge, Tennessee

Dr. Lyman Dean
Soil and Water Conservation Branch
Soils Research Laboratory
U. S. Department of Agriculture
Beltsville, Maryland

If it is not convenient to make the three separate shipments, then the entire lot could be sent direct to Dr. Dean, as he has indicated that he could handle it and make reshipments to the various people who wish to have some of the soil.
